EDUCATION

GURU GOBIND SINGH INDRAPRASTHA UNIVERSITY 2024 - Present
Full-time Bachelor of Technology in Artificial Intelligence and Data Science New Delhi, India
CGPA: 8.8

EXPERIENCE

SYNK | Forward Deployed Engineer Intern Texas, U S Remote | August 2026 – October 2026

Contributed to building a personalized meeting experience platform that adapts interactions based on host-provided context and participant interests. Worked on features that identify common interests among participants and generate relevant insights and suggestions to make conversations more engaging and context-aware. Focused on translating product requirements into practical, user-facing engineering solutions.

FLYRANK AI | Machine Learning Intern Chicago, U S Remote | July 2026 – August 2026

Worked with 78M+ Google Search Console and GA4 data rows to develop content opportunity scoring workflows.

Utilized DuckDB for large-scale analytical data processing.

Developed data contracts and leakage-safe features for reliable model inputs.

Worked on ranked outputs to identify high-value content opportunities.

INTEL ONEAPI STUDENT CLUB (IOSC), EDC | Technical Lead New Delhi, India

* Lead technical initiatives and mentor student developers across multiple engineering domains.
* Drive technical planning and execution of hackathons, workshops, and developer-focused events.
* Spearheaded the technical execution of Azinhack 2026, coordinating teams and managing technical operations.
* Facilitate industry collaborations and technical initiatives with Intel, Microsoft, Docker, and Solana.

SKILLS

Programming Languages	Python, Java, JavaScript, TypeScript, C, SQL
Libraries/Frameworks	React, Next.js, Node.js, Express, React Native, Tailwind CSS, FastAPI, Pandas, NumPy, MatPlot, Seaborn, Scikit-learn
Tools / Platforms	Git, GitHub, Linux, Google Cloud Platform, Node-RED, WebSockets, Hadoop, Vercel, Render, YOLO, ByteTrack
Databases	MongoDB, MySQL, Neo4j

PROJECTS / OPEN-SOURCE

KERB - PRESERVE THE CURVE | Link Next.js, Python, YOLOv12, ByteTrack, OpenCV, Google Colab

AI-powered motorsport intelligence system that detects potential track-limit violations in race footage and generates evidence packages for human stewards. Integrates YOLOv12, ByteTrack, vehicle geometry analysis, temporal filtering, and trust scoring to support reliable incident detection.

Validates suspected violations across consecutive frames to reduce false positives and improve detection confidence. Designed as a steward-assist system, not an automated referee.

Project being forwarded to **Haas F1 Team** by Jason Kew for potential industry review.

THREADLY | Link Neo4j, Workflow Automation, Natural Language Processing, Multi-Agent Systems

An AI-powered relationship intelligence platform that helps individuals and teams build, manage, and maintain meaningful connections. Features a coordinated crew of AI agents for contact enrichment, personalized follow-ups, email qualification, social conversation monitoring, and meeting intelligence. Builds a living relationship graph with context-aware insights, relationship warmth scoring, and human-approved outreach.

LAPLOGIC | Link Next.js, Solidity, Node.js, ethers.js, MongoDB, Polygon

A Web3-powered Formula 1 fantasy strategy game built around the 2026 season. Build your team with 3 drivers and 1 constructor under a 60M GameCoin budget, tackle AI-generated race prediction challenges, and compete through skill-based strategy. Built on Polygon with smart-contract-powered payouts, wallet integration, and a frictionless onboarding experience that requires no upfront crypto.

ECHOME X - AI TWIN PLATFORM JavaScript, Node.js, Express, MongoDB, Groq API

Full-stack AI platform enabling users to create digital personas with real-time conversational AI. Custom backend in Node.js and Express integrated with Groq API for low-latency AI responses; frontend deployed on Vercel and backend on Render.

CERTIFICATIONS

- Hacktoberfest 2025 Contributor - Digital Ocean & Holopin
- Google Cloud Facilitator Program - Cohort 2 (Milestone 1) - Google
- Duke University Java Programming: Solving Problems with Software - Coursera

HONORS & AWARDS

- Smart Delhi Ideathon 2025: Winner for HydroHeroes IoT project
- TrackShift Innovation Challenge 2026: Shortlisted for the final hack day with KERB as Team Lead.
- Aspire Leaders Program: Selected as a Fellow for Cohort 3 by Aspire Institute (Harvard-founded initiative).
- Extended Leadership Program: Selected for the Higher Education & Research track.
